Purpose of the Product: Design ventilation grille for supply and exhaust air, suitable for wall and ceiling installation in family houses and flats.

Material: This product is made from PETG material. Marbel version is made from PLA. There are 4 neodymium magnets on the inset.

Disposal and Recycling: The PETG material is fully recyclable. Please check if your local recycling system accepts this type of plastic. If so, it can be disposed of in a plastic recycling bin. If not, contact specialized recycling centres. For PLA material contact the recycle centre.

Package includes: Grille with frame (inset) for Hexagon 25 x insertion modules for flow and range control.

Technical Specifications: The Flat Grille is fully compatible with all types of LUFTOMET® Flat Plenum Boxes and Extension pieces. It is supplied with a mounting frame with neodymium magnets. The Hexagon variant - possibility to regulate the air flow rate and throw lengths by inserting up to 25 insertion models.

Operating temperature: -10 °C to +45 °C.

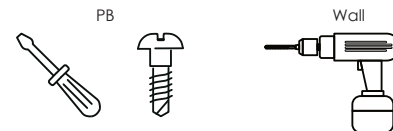

Safety Instructions: The product must not be exposed to temperatures higher or lower than the specified Operating temperature. Always consult an HVAC designer before use.

Maintenance and Cleaning: Clean the grille with a slightly damp, chemical-free cloth.
